Part I CLASSICAL SENTENTIAL LOGIC

Chapter 1: What Is Logic? 3

1. Arguments 3
2. Logical form and validity 5
3. Complications 8
4. A note to the reader 10
5. Summary 11

Chapter 2: First Steps in Symbolization 12

1. The sentential connectives 12
2. Negations, conjunctions and disjunctions 14
3. Conditionals and biconditionals 20
4. Symbolizing entire arguments 27
5. The syntax of the formal language 35
6. Quotation, selective and otherwise 40
7. Summary 44

Chapter 3: Semantics for Sentential Logic 45

1. Truth-functions 45
2. Classifying formulae 53
3. Testing for validity by exhaustive search 58
4. Testing for validity by constructing interpretations 62
5. Testing for validity with semantic tableaux 68
6. Properties of semantic consequence 72
7. Expressive completeness 74
8. Non-truth-functional connectives 81
9. Summary 85

Chapter 4: Natural Deduction in Sentential Logic 86

1. The concept of proof 86
2. Rules for conjunction and the conditional 88
3. Sequents and theorems 100
4. Rules for negation 102
5. Rules for disjunction 109
6. The biconditional 117
7. Heuristics 119
8. Sequent and Theorem Introduction 120
9. Alternative formats for proofs 128
10. Systems equivalent to NK 133
11. Semantic and deductive consequence compared 140
12. Summary 144

Part II

MONADIC PREDICATE LOGIC

Chapter 5: Predication and Quantification in English 149

1. A different type of argument 149
2. Further steps in symbolization: the existential quantifier 152
3. More symbolizations: the universal quantifier 158
4. The syntax of LMPL 165
5. Summary 169

Chapter 6: Validity and Provability in Monadic
Predicate Logic 170

1. Semantics for the quantifiers 170
2. Constructing counterexamples 180
3. Deductive consequence: quantifiers in NK 185
4. The rule of Existential Elimination 195
5. Extensions of sequent introduction 204
6. Decision procedures 207
7. Tableaux for monadic predicate logic 211
8. Alternative formats 214
9. Summary 216

Part III

FIRST-ORDER LOGIC WITH IDENTITY

Chapter 7: Advanced Symbolizations 219

1. N-place predicates 219
2. Identity, number and descriptions 231
3. The syntax of LFOL 241
4. Ambiguity 243
5. Summary 249

Chapter 8: Validity and Provability in First-Order Logic with Identity 250

1. Interpretations in LFOL 250
2. Demonstrating invalidity 257
3. Proofs in NK 263
4. Rules for identity in NK 269
5. Properties of binary relations 275
6. Alternative formats 282
7. Semantic consequence, deductive consequence and decidability 283
8. Some limitations of first-order logic 286
9. Summary 291

Part IV

EXTENSIONS AND ALTERNATIVES TO CLASSICAL LOGIC

Chapter 9: Modal Logic 295

1. Modal operators 295
2. A definition of semantic consequence for sentential modal logic 296
3. The canonical translation 301
4. Natural deduction in S5 306
5. First-order modal logic: S5 semantics 313
6. First-order modal logic: natural deduction 321
7. Summary 332

xii Contents

Chapter 10: Intuitionistic Logic 333

1. The motivation for intuitionistic logic 333
2. Semantic consequence in intuitionistic sentential logic 338
3. Intuitionistic monadic predicate logic 344

Chapter 11: Fuzzy Logic 349

1. Sorites paradoxes 349
2. Degrees of truth 351
3. Fuzzy semantics for LFOL 352
4. Resolution of the paradoxes 356

Appendix: Using MacLogic 358

Solutions to Selected Exercises 360
