Assume that this is a 100% tax on labor in X:  $TLX = 1$ .  
 Let the CONSUMER price (wage) of labor equal 1:  $PL = 1$ .  
 The PRODUCER price (cost) of labor in X is equal to 2:  
 $PL * (1 + TLX) = 2$

\$OFFTEXT

**SCALAR** TX      Proportional output tax on sector X,  
 TY      Proportional output tax on sector Y,  
 TLX      Ad-valorem tax on labor inputs to X,

TKX Ad-valorem tax on capital inputs to X  
TAXREV Total tax revenue from all sources;

## POSITIVE VARIABLES

X Activity level for sector X  
Y Activity level for sector Y  
W Activity level for sector W  
PX Price index for commodity X  
PY Price index for commodity Y  
PL Price index for primary factor L  
PK Price index for primary factor K  
PW Price index for welfare (expenditure function)  
CONS Income definition for CONS  
PPLX Producer price for L in X  
PPKX Producer price for K in X  
PPX Producer price for X  
PPY Producer price for Y;

## EQUATIONS

PRF\_X Zero profit for sector X  
PRF\_Y Zero profit for sector Y  
PRF\_W Zero profit for sector W  
  
MKT\_X Supply-demand balance for commodity X

MKT\_Y      Supply-demand balance for commodity Y  
 MKT\_L      Supply-demand balance for primary factor L  
 MKT\_K      Supply-demand balance for primary factor L  
 MKT\_W      Supply-demand balance for aggregate demand  
  
 I\_CONS     Income definition for CONS  
  
 RPPLX     Relation between consumer and producer price L in X  
 RPPKX     Relation between consumer and producer price K in X  
 RPPX      Relationship between producer and consumer price of X  
 RPPY      Relationship between producer and consumer price of Y;

\*      *Zero profit conditions:*
